**DETAILED ACTION** 

In view of the Appeal Brief filed on February 8, 2011, PROSECUTION IS HEREBY

REOPENED.

To avoid abandonment of the application, appellant must exercise one of the following

two options:

(1) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37

CFR 1.113 (if this Office action is final); or,

(2) initiate a new appeal by filing a notice of appeal under 37 CFR 41.31 followed by an

appeal brief under 37 CFR 41.37. The previously paid notice of appeal fee and appeal brief fee

can be applied to the new appeal. If, however, the appeal fees set forth in 37 CFR 41.20 have

been increased since they were previously paid, then appellant must pay the difference between

the increased fees and the amount previously paid.

A Supervisory Patent Examiner (SPE) has approved of reopening prosecution by signing

below:

/George Eng/

Supervisory Patent Examiner, Art Unit 2617.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the

basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Application/Control Number: 10/765,133 Page 3

Art Unit: 2617

Claims 1 and 6-11 are rejected under 35 USC 102(b) as being anticipated by Parolari (EP 1 255 368).

Consider claim 10. Parolari discloses a mobile station comprising:

a radio link control (RLC) transmitter which receives acknowledgment/non-acknowledgement (ACK/NACK) messages transmitted by an RLC receiver, said messages comprising a start sequence number (SSN) and a received block bitmap (RRB) (page 7 lines 24-42, read as Transfer of RLC Data Blocks, where there is a sending side (the MS or the network), which transmits radio blocks within a window and the receiving side sends either Packet Uplink Ack/Nack or Packet Downlink Ack/Nack message when needed, where the message acknowledges all correctly received RLC Data Blocks up to an indicated block sequence number (BSN) (i.e. start sequence number) and a bitmap that starts at the same RLC Data Block is used); and

means for, in a transfer mode corresponding to Enhanced General Packet Radio Service (EGPRS), taking into account SSN and RRB information transmitted in a non-acknowledged mode (page 7 lines 43-53, read as the transfer of RLC Data Blocks in the unacknowledged RLC mode is controlled by the numbering of the RLC Data Blocks participating one Temporary Block Flow, where the same mechanism and message format for sending temporary acknowledgement messages is used as for acknowledged mode in order to convey the necessary control signaling (i.e. taking into account SSN and RRB information)).

Consider claim 11 (and similarly applied to claim 1). Parolari discloses a mobile communication network equipment comprising:

a radio link control (RLC) transmitter which receives acknowledgment/non-acknowledgement (ACK/NACK) messages transmitted by an RLC receiver, said messages comprising a start sequence number (SSN) and a received block bitmap (RRB) (page 7 lines 24-42, read as Transfer of RLC Data Blocks, where there is a sending side (the MS or the network), which transmits radio blocks within a window and the receiving side sends either Packet Uplink Ack/Nack or Packet Downlink Ack/Nack message when needed, where the message acknowledges all correctly received RLC Data Blocks up to an indicated block sequence number (BSN) (i.e. start sequence number) and a bitmap that starts at the same RLC Data Block is used); and

means for, in a transfer mode corresponding to Enhanced General Packet Radio Service (EGPRS), taking into account SSN and RRB information transmitted in a non-acknowledged mode (page 7 lines 43-53, read as the transfer of RLC Data Blocks in the unacknowledged RLC mode is controlled by the numbering of the RLC Data Blocks participating one Temporary Block Flow, where the same mechanism and message format for sending temporary acknowledgement messages is used as for acknowledged mode in order to convey the necessary control signaling (i.e. taking into account SSN and RRB information)).

Consider **claims 6-8 and as applied to claim 1**. Parolari discloses a mobile station, mobile radio system equipment, and a mobile radio system including means for implementing a method according to claim 1 (page 7 line 26, read as mobile station and network).

Consider **claim 9** and as applied to claim 1. Parolari discloses wherein the non-acknowledged mode is General Packet Radio Service (GPRS) mode or Temporary Block Flow (TBF) Mode (page 7 lines 43-53, Temporary Block Flow).

Application/Control Number: 10/765,133 Page 5

Art Unit: 2617

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in Graham v. John Deere Co., 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 4 and 5 are rejected under 35 USC 103(a) as being unpatentable over Parolari (EP 1 255 368) in view of Leitch et al. (US Patent 5,546,411).

Consider **claim 4** and as applied to claim 1. Parolari discloses the claimed invention but fails to explicitly teach a method wherein said acknowledgment information is taken into account by an RLC sender to estimate transmission quality.

However, Leitch teaches a method wherein said acknowledgment information is taken into account by an RLC sender to estimate transmission quality (column 1 lines 55-61, read as the acknowledgement signal comprises a signal quality estimate).

Art Unit: 2617

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have incorporated the teachings of Leitch into the invention of Parolari in order to achieve maximum throughput efficiency and economy of system design.

Consider **claim 5 and as applied to claim 4**. Parolari and Leitch disclose wherein said transmission quality estimate is used for radio link adaptation (Leitch; column 1 lines 47-50, read as adaptively selecting a communication strategy).

## Conclusion

Any response to this Office Action should be **faxed to** (571) 273-8300 **or mailed to:** 

Commissioner for Patents

P.O. Box 1450

Alexandria, VA 22313-1450

Hand-delivered responses should be brought to

Customer Service Window Randolph Building 401 Dulany Street Alexandria, VA 22314

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christopher M. Brandt whose telephone number is (571) 270-1098. The examiner can normally be reached on 7:30a.m. to 5p.m..

Application/Control Number: 10/765,133

Art Unit: 2617

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

Page 7

supervisor, George Eng can be reached on (571) 272-7495. The fax phone number for the

organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would

like assistance from a USPTO Customer Service Representative or access to the automated

information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

Any inquiry of a general nature or relating to the status of this application or proceeding

should be directed to the receptionist/customer service whose telephone number is (571) 272-

2600.
